SENTINEL**DNA**™

SENTINEL®

STATE-OF-THE-ART ELECTRONIC MONITORING + CASE MANAGEMENT

SentinelDNA™ is our state-of-the-art, web-based monitoring and tracking software application that allows law enforcement and corrections agencies to conduct all of their monitoring functions in real-time. This powerful software solution integrates with all Sentinel RF, GPS tracking and alcohol monitoring equipment and includes customizable features and benefits only available from Sentinel.

Beyond integrating the basics, Sentinel DNA provides single-signeon, singlec-screen access to all of the tools that today's larger and larger case loads deman.

Case management, data analytics and even principles of artificial inteligence delivered through an intuitive graphical user interface all combine to make this one of the most powerful information platforms available for offender management systems in the industry.

SENTINEL | DNA
AT THE CORE OF WHAT WE DO.

+ POWERFUL INTUITIVE USER INTERFACE
SentinelDNA offers an easy to use, intuitive user interface that makes the monitoring of individuals, groups or an officer's entire caseload a simple, straightforward process. In addition, DNA offers the flexibility for users to create and adjust participant compliance schedules in real-time and, at the same time, create complex notification procedures for each individual participant or groups.

+ CLIENT DASHBOARD
DNA includes a powerful dashboard feature that provides an at-a-glance overview that can be filtered to meet the user's needs with just a mouse click. Smartphone and tablet accessible, SentinelDNA provides convenient, view anywhere access and provides users with the freedom to monitor program participants at any time.

+ INVENTORY MANAGEMENT
Sentinel has included comprehensive inventory management functionality that allows customers to order needed equipment or consumables and the ability to generate return merchandise authorizations (RMAs)—both conveniently from within the DNA platform.

+ ROBUST CASE MANAGEMENT
Sentinel leveraged its 20 plus years of case management experience to create an optional robust case management module that allows supervising officers to utilize this enhanced functionality to effectively manage all aspects of the participant's supervision beyond that of just normal electronic monitoring related events. A complete description of our case management module and its benefits will be outlined in a forthcoming communication dedicated specifically to our case management module.

+ ANALYSIS = POINT-PATTERN ANALYSIS (PPA)
Built-in Point Pattern Analysis is Sentinel's proprietary tool that allows users to analyze a participant's daily routine and quickly identify deviations that may indicate a compliance violation. To make the analysis of a participant's GPS activity more efficient, DNA allows users to add labels to the locations that a participant visits as part of their daily, weekly or monthly routine (pattern). Using these labels allows for the quick identification of a location that is not associated with a participant's normal routine (pattern).
